

**Learn How Label Holders  
“Don’t Cost – They Pay!”**

# Label Holders Pay You in Time Saved-Over and Over! *Here's how:*

- **Simple and quick designation or location changes**

Insertable plastic label holders make it easy to change a label or location. Simply re-mark the insert and slide it into the holder. This feature was pioneered by Aigner Index over Fifty (50) years ago for the filing industry, and since, has been adapted to every storage application imaginable.

As Chip Viel of Sargent/ Assa Abloy, New Haven, Ct. recently wrote to tell us: "I can't believe the neatness, durability and overall cost savings with your products. The barcode compatibility lends itself to our frequent systems changes. I just wanted to tell you how great your products are".

Many fortune 100 Companies have experienced the same positive result: Ford, GM, Caterpillar, Kawasaki, McDonald's, Rite-Aide, Mazda, U.S. Postal Service, McKesson, MTD Products and Graybar Electric, just to name a few.

- **Better Organization of Storage**

Every efficient storage facility must know where everything is - All of the time. This would be much easier to accomplish if products and locations did not change, but they do, and that's when problems develop. Label Holders are a management tool that offers a solution. They even make a better working environment for the employees to be more productive.

- **Cost Justification is Easy**

***The total cost for a label holder system rarely exceeds 4% of the total warehouse cost, yet no other single function contributes more savings.*** Whatever the initial investment is for a Label Holder System, it has been very well documented that payback in materials, labor and overall efficiency will be justified by:

- 1) Ease of normal label changes.
- 2) Cost savings of 50% in label materials; eliminating expensive, hard to remove, adhesive labels in favor of plain paper labels.
- 3) 65% Minimum savings in labor to apply and remove self adhesive labels – No more clean up time.

- **Protecting Bar Codes is a Must**

Most storage and distribution facilities either use an automated barcode inventory system or expect to start in the near future. Barcodes must be protected from dirt, moisture and chemicals to prevent an inaccurate scan. This would obviously create an inventory discrepancy or possibly even a lost customer. Most of Aigner's clear plastic insertable label holders come in a matte, non glare finish, which ensures scanning compatibility while protecting the barcode.

- **Little or No Cost for Printing Labels**

No need to contract outside printing service for label designations. Most label holders are supplied with pre-perforated laser/ ink-jet compatible sheets and simple printing instructions in a standard “word” processing format. The laser stock is a high quality 60lb cover in bright white or an array of colors. Print neat and professional labels, in house, well in advance or on demand at virtually no additional expense.

- **Label Holders for Every Storage Solution**

Years of consumer demand for new product development has resulted in a wide selection of label holders with a choice of backings. Permanent self adhesive for permanent applications or removable self adhesive, magnetic and fabric hook and loop fasteners for the versatility to relocate the label holder. These options feature change and relocation of the paper insert. All were engineered to solve a specific labeling problem. Here’s a short list of solutions for the major storage applications:

**1) Aisle Signage** – “Slip ‘n Stik” Insertable plastic aisle sign kit’s plastic holder mounts into the assembly holes on the face of pallet racks or shelving uprights. This starts the warehouse mapping process. Print paper inserts on a laser or ink-jet printer – change as often as required for only the cost of paper.

**2) Pallet Racks** – “Super•Scan®” features larger sizes (3” x 5”, 4” x 6”, 5” x 8”) for better visibility. Barcode compatible, non-glare finish in self adhesive or magnetic backings, top or side loading. Mix and Match for the perfect labeling solution. Laser inserts included.

**3) Steel Shelving** – Several styles, including patented “Hol•dex” in many size options, side or top loading, self adhesive or magnetic backing. Laser Inserts available.

**4) Wire Shelving** – “Wire•Rac” Label Holders offer three (3) separate styles to fit most major brands of wire shelving. Snap-on to install, snap-off to re-locate. Barcode compatible matte finish and laser inserts are all standard.

**5) Plastic Bins and Totes** - “Bin•Buddy’s” feature permanent self adhesive backing engineered for smooth plastic surfaces. Four (4) popular sizes, bar code compatible, with laser inserts included.

**6) Floor Storage** – Floor labeling kit with durable “oval” aluminum frame and clear Lexan protective cover plus hardware. Print polyester labels in house on thermal transfer printer and install, in less than five (5) minutes.

### **Complete application chart attached**

- **Return on Investment**

This is what it’s all about. At what point does your investment in label holders start to pay monetary returns? Calculate the total savings on time and materials and consider the contribution to productivity from a better overall working environment. The results of case studies performed by major retailers confirm that the return on your initial investment will occur within a twelve (12) month period after the purchase.

**Aigner Label Holders** are distributed through most national industrial supply companies: Grainger, McMaster-Carr, MSC Direct, Fastenal, C & H Distributors, Global Equipment, Lab Safety Supply and over 2,500 Material Handling Dealers Nationwide.
